

Press release –

“Safe use of portable ladders and water-fed pole systems” is the title of the FWC Safety training DVD which shows the importance of a thorough inspection of the site and of the equipment, as well as the importance of safety in securing the ladder and its correct use with an emphasis on the potential consequences.

Traditionally, window cleaners have used all manner of ladders and platforms to reach the higher windows, but the introduction of new technology and the Working at Height Regulations in 2005 have shown us that if it's not essential to work at height...then don't!

Using these telescopic poles might seem like the ultimate solution, but they're not without their Dangers, in this short video, we'll aim to show you not only how to get the most out of your water-fed Pole system but how to keep you and the people around you safe.

This DVD compliments their IOSH Accredited 'Cleaning Windows Safely' training course, written by window cleaners for window cleaners and New Risk Assessment course launched for 2010.
